

ULTRA-HIGH PRESSURE WATER BLASTING

A STATE-OF-THE-ART, FAST AND EFFICIENT SOLUTION

AT ORSKOV YARD WE OFFER AN EFFICIENT PROCESS WITH ABSOLUTE MINIMUM DOWNTIME FOR THE VESSEL

Water blasting is a fast and efficient alternative to sand blasting. The method uses blasting pressure up to 3200 bar, with an arm reaching up to 32 meters from the dock floor. You will benefit from the robots' flexibility and dust free work reducing your ship's hull treatment time significantly.

With our latest in-house water blasting equipment, including robots, crawlers and handheld units, we can blast over 200 m² per hour. Since the method is dust-free it does not interfere with other dock work, which can then be performed at the same time." – Premator Denmark.

EQUIPMENT AT ORSKOV YARD:

DockMate - Reaching height 32m

DockBoy - Reaching height 10m

SpiderJet - Hull crawler

Aquablast Plus - Deck blaster

Handheld units - For hard accessible areas
